In geometry, the centre of mass of a two-dimensional figure or three-dimensional solid

Thus the **centroid** of a two-dimensional figure represents the point at which it could be were cut out of, for example, sheet metal. The centroid of a circle or sphere is its center. Generally, the centroid represents the point designated by the mean (see mean, media) of the coordinates of all the points in a set. If the boundary is irregular, finding the mean using calculus (the most general formula for the centroid involves an integral).

**Second ACM international workshop on Data engineering for wireless and mobile access** May 2001

This paper shows how a standard mobile data technology, Cellular Digital Packet Data (CDPD), can be used to localize mobile data users, and provide location based services. We present a location determination system that is handset-based. Using CDPD and modem protocols, this system extracts the location of the users up to the cell site coverage in the network; it also exposes this location information to the application layer. We have implemented a prototype of the entire system; it works nat ...

In geometry, the centre of mass of a two-dimensional figure or three-dimensional solid

Thus the **centroid** of a two-dimensional figure represents the point at which it could be were cut out of, for example, sheet metal. The **centroid** of a circle or sphere is its center. Generally, the **centroid** represents the point designated by the mean (*see* [mean](#), [media](#)) of the coordinates of all the points in a set. If the boundary is irregular, finding the mean using [calculus](#) (the most general formula for the **centroid** involves an [integral](#)).
